

### Safety Seminars

Lift-All Company offers a “Safety in Lifting” seminar. A Lift-All representative will come to your location with the Lift-All video “Safety in Lifting” and discuss sling information that is appropriate to your employees.

In addition to the basic information covered in the video, the seminar also provides a chance for your employees to ask questions concerning the use of slings in their job. Are the best slings being used for the application? How can slings last longer?

The seminar offers the opportunity to expand sling knowledge and bring awareness to sling and lifting safety.

Contact your distributor of industrial supplies to arrange for your *Safety in Lifting* seminar.

Care & Operating Practices

### Sling Inspections

OSHA regulations require that all chain slings receive a thorough inspection at least once per year by a competent person. A factory trained Lift-All representative can provide a thorough documented sling inspection on all your slings. Chain slings, wire rope slings, web slings, roundslings and wire mesh slings can be inspected in one survey by a representative from the only company that makes them all, Lift-All Company.

#### The Inspection Procedure

- Each sling is individually recorded and reported by location, serial number (if available), size, type, reach and condition.
- If desired, we will affix warning tags to those slings found to be damaged.
- A Sling Survey Report will be submitted to you for your records, showing the above information along with any recommendations we may have for improving sling life and lifting safety.
- If you wish to repair or replace any of the damaged slings, we will provide cost estimates to do so.

Sling Inspections not only help to ensure safe lifting equipment but also increase employee awareness of sling safety, creating a safer workplace for all.
